AD: US 5 527 226

In the belt type continuously variable transmission disclosed in this publication, an oil hole provided in the radius direction of a pulley shaft is provided between two bearings which support the pulley shaft. Then, the pulley shaft might be distorted (i.e. bended) by a bending force due to a tension of the belt which applies to the pulley shaft, and a stress might be concentrated to the oil hole in the radius direction.

AQ: JP 03 048148

In the belt type continuously variable transmission disclosed in this publication, an oil hole provided in the radius direction of a pulley shaft is also provided between two bearings which support the pulley shaft. Then, the pulley shaft might be distorted (i.e. bended) by a bending force due to a tension of the belt which applies to the pulley shaft, and a stress might be concentrated to the oil hole in the radius direction.
